SUMMARY

Computer Science and Engineering student specializing in AI & ML at JECRC University, with a 9.04 CGPA and hands-on experience building, testing, and deploying software applications. Proficient in Python, Java, C++, SQL, REST APIs, debugging, and automated testing. Experienced in diagnosing API failures, building fallback and error-handling mechanisms, and validating application behavior through automated tests. 1st Runner-Up at CodeX 3.0, with a strong interest in software engineering, technical troubleshooting, system reliability, and enterprise technology.

EDUCATION

JECRC University, Jaipur, Rajasthan **CGPA: 9.04/10**
Bachelor of Technology in Computer Science and Engineering (AI & ML) Expected Graduation: 2028

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, JavaScript, TypeScript, SQL
Software Development: REST APIs, Spring Boot, Express.js, JWT Authentication, React
Databases: MySQL, MongoDB, Firebase Firestore
Testing & Troubleshooting: JUnit 5, Mockito, Vitest, Debugging, Error Handling
Tools & Platforms: Git, GitHub, Docker, Flyway, Render, Swagger/OpenAPI
AI Technologies: LangChain, LangGraph, Gemini API, Groq API
CS Fundamentals: Data Structures and Algorithms, Problem-Solving, Analytical Thinking

PROJECTS

QuickBite: Food Delivery REST API | *Java 21, Spring Boot, MySQL, Flyway, JWT, Docker* | GitHub

- Developed role-based REST APIs for customers, restaurant owners, and administrators, implementing JWT authentication, BCrypt password hashing, and authorization checks.
- Implemented transactional order processing with availability validation, price snapshots, and fee calculations to maintain data consistency.
- Wrote JUnit 5 and Mockito tests covering authentication, input validation, cart operations, and order-processing rules.
- Managed database schema changes using Flyway migrations and documented API endpoints with Swagger/OpenAPI.

SkillForge AI: Career Readiness Platform | *React, TypeScript, Node.js, Express, Gemini API* | Live | GitHub

- Built a career-readiness platform that evaluates student profiles against job requirements and identifies skill gaps using an explainable scoring engine.
- Implemented automated error recovery with a deterministic fallback when the Gemini API encounters timeouts or quota limits.
- Developed automated tests using Vitest, with 365 tests across 32 suites, covering application logic and key workflows.
- Deployed the application on Render and submitted it to the SaarthiX Hackathon 2026.

MORPHOS: Autonomous AI Experimentation | *LangChain, LangGraph, React, Express, Firebase* | Live | GitHub

- Developed a seven-stage LangGraph workflow for hypothesis generation, experimentation, analysis, and confidence scoring, with iteration limits to prevent runaway execution.
- Implemented Firebase ID-token verification and user-specific Firestore storage to protect access to investigation records.
- Added a deterministic fallback for Gemini API quota errors (HTTP 429), allowing core experimentation workflows to continue when the external AI service is unavailable.

ACHIEVEMENTS

1st Runner-Up, CodeX 3.0 Hackathon | Panipat Institute of Engineering and Technology (organized by Hackingly)

- Secured 1st Runner-Up among 100 teams in a 36-hour hackathon, winning a team cash prize of ₹40,000.
- Collaborated in a five-member team to build GuardSaaB, an AI agent governance platform featuring permission enforcement, human approval for sensitive actions, and tamper-evident audit logs.

Data Structures & Algorithms: Solved 100+ problems across LeetCode and GeeksforGeeks using C++, covering arrays, hashing, sorting, and dynamic programming.

CERTIFICATIONS

- Data Analysis using Python, Samatrix Consulting (Jan 2026)
- Probabilistic Modelling and Reasoning with Python, Samatrix Consulting (Jan 2026)
- Python Basics, Accenture FutureSkills Prime (Jan 2025)
- Introduction to Generative AI: Art of the Possible, Amazon Web Services (Jan 2025)
